

GEN 2 TABLES AND CODES**GEN 2.1 MEASURING SYSTEM, AIRCRAFT MARKINGS, HOLIDAYS****2.1.1 Units of Measurement**

The table of measurement shown below will be used by aeronautical stations within Manila FIR for air ground operations.

For measurement of	Units used
Distance used in navigation, position reporting, etc., generally in excess of 2 to 3 nautical miles	NAUTICAL MILES AND TENTHS
Relatively short distances such as those relating to aerodomes (e.g. runway lengths)	METERS OR FEET
Altitudes, elevations and heights	METERS OR FEET
Horizontal speed including wind speed	KNOTS
Vertical speed	FEET PER MINUTE
Wind direction for landing and take-off	DEGREES MAGNETIC
Wind direction except for landing and take-off	DEGREES TRUE
Visibility, including runway visual range	KILOMETERS OR METERS
Altimeter setting	HECTOPASCAL OR INCHES OF MERCURY
Temperature	DEGREES CELSIUS (CENTIGRADE)
Weight	KILOGRAMS OR METRIC TONS
Time	HOURS AND MINUTES (UTC) (Local time plus 8 Hours)

2.1.2 Temporal Reference System

2.1.2.1 Gregorian calendar and Coordinated Universal Time (UTC) are used as the temporal reference system for all AIS publications. Reporting of time is expressed to the nearest full minute e.g. 12:40:35 is reported 1241. Local time is 8 hours ahead of UTC. Time checks to aircraft are accurate to within 30 seconds.

2.1.2.2 The local standard time throughout the Philippines in UTC is plus (+) 8 hours.

2.1.3 Horizontal Reference System

2.1.3.1 All published geographical coordinates (indicating latitudes and longitudes) are published in World Geodetic System - 1984 (WGS-84).

2.1.3.2 In precise geodetic applications and some air navigation applications, temporal changes in the tectonic plate motion and tidal effects on the Earth's crust shall be modelled and estimated. To reflect the temporal effect, an epoch shall be included with any set of absolute station coordinates.

2.1.3.3 The area of application for the published geographical coordinates coincides with the area of responsibility of the Aeronautical Information Service i.e. the entire territory of the Philippines as well as the airspace over the high seas encompassed by the Manila Flight Information Region.

2.1.3.4 Geographical Coordinates which have been transformed into WGS-84 coordinates but whose accuracy of original field work does not meet the requirements in Civil Aviation Regulations - Air Navigation Services (CAR-ANS) 11.2, and Manual of Standards for Aerodromes, shall be identified by an asterisk.

2.1.4 Vertical Reference System

2.1.4.1 Mean sea level (MSL) datum, which gives the relationship of gravity-related height (elevation) to a surface known as the geoid, shall be used as the vertical reference system in the Philippines.

2.1.4.2 The Earth Gravitational Model - 1996 (EGM-96), containing long wavelength gravity field data to degree and order 360 is used in the Philippines as the global gravity model.

2.1.5 Aircraft Nationality and Registration Marks

The nationality mark for aircraft registered in the Republic of the Philippines is the letter RP. The nationality mark is followed by a hyphen and a registration mark consisting of a letter(s) and figure(s) or of figures only, e.g. RP-C225, RP-X5, RP-C154, etc.

2.1.6 Public Holidays

Name	Date
New Year's Day	01 January
Maundy Thursday	Thursday before Easter
Good Friday	Friday before Easter
The Day of Valor	09 April
Labor Day	01 May
Independence Day	12 June
National Heroes Day	last Monday of August
All Saints Day	01 November
Bonifacio Day	30 November
Christmas Day	25 December
Rizal Day	30 December
