

GEN 3.4 COMMUNICATIONS SERVICES

1. Responsible service

1.1 The responsible service for the provision of telecommunication and navigation facility services in the Philippines are the Air Traffic Service (ATS) and Air Navigation Service (ANS) of the Civil Aviation Authority of the Philippines (CAAP) .

1.2 Inquiries, suggestions and/or complaints regarding any telecommunication and navigation facility services should be referred to the Director General of Civil Aviation Authority of the Philippines :

The Director General
Civil Aviation Authority of the Philippines
CAAP Main Building, MIA Road
Pasay City, Metro Manila 1300
Philippines

1.3 The service is provided in accordance with the provisions contained in the following ICAO Documents:

Annex 10 - Aeronautical Telecommunications, Vol. I - 6th Edition.

Doc. 8400 - Procedures for Air Navigation Services - ICAO Abbreviations and Codes (PANS-ABC)

Doc. 8585 - Designators for Aircraft Operating Agencies, Aeronautical Authorities and Services

Doc. 7030 - Regional Supplementary Procedures (COM Procedures for MID/ASIA)

Doc. 7910 - Location Indicators

1.4 Differences to these provisions are detailed in subsection GEN 1.7.

2. Area of responsibility

2.1 Communication services are provided for the entire Manila FIR.

3. Types of services

3.1 Radio Navigation Service

3.1.1 The following types of radio aids to navigation are available:

- Distance Measuring Equipment (DME)
- Instrument Landing System (ILS)
- LF/MF Non-directional Beacon (NDB)
- VHF Omni-directional Radio Range (VOR)
- Terminal Radar (ASR)
- Enroute Radar (ARSR)
- Secondary Surveillance Radar (SSR)

3.1.2 Limited GCA, TACAN and VDF are available in the area and these facilities are maintained and operated by military agencies. Any inquiries regarding their operational status should be directed to the particular agency involved. Manila ACC may be requested to coordinate with the appropriate military agency regarding the use of their navigational aids.

3.1.3 According to the judgement of the direction-finding station, bearings are classified as follows:

Class A - accurate within ± 2 degrees

Class B - accurate within ± 5 degrees

Class C - accurate within ± 10 degrees

3.1.4 Direction-finding stations have authority to refuse to give bearings or headings to steer when conditions are unsatisfactory or when bearings do not fall within the calibrated limits of the station, stating the reason at the time of refusal.

3.2 Mobile/fixed service

3.2.1 Mobile service - The aeronautical mobile stations maintain a continuous watch on their stated frequencies during the published hours of service unless otherwise notified.

3.2.2 An aircraft should normally communicate with the air-ground control radio station which exercises control in the area in which it is flying. Aircraft should maintain continuous watch on the appropriate frequency(ies) of the control station and should not abandon watch without informing the control radio station except in an emergency

3.2.3 Fixed service - Messages to be transmitted over the Aeronautical Fixed Station are accepted only if they satisfy the requirements of:

- a. Annex 10, Vol. II, Chapter 3, 3.3 and/or corresponding national regulations;
- b. they are prepared in the form specified in ICAO Annex 10;
- c. the text of an individual message does not exceed 200 groups.

3.2.4 General aircraft operating agency messages are only accepted for transmission to countries which have agreed to accept Class "B" traffic.

3.3 Broadcasting service

3.3.1 VHF Automatic Terminal Service (ATIS) broadcast is available for arriving and departing aircraft on prescribe times at selected airports.

3.4 Language used: English

3.5 Private Aeronautical Station Frequency Band

3.5.1 The following frequencies in the aeronautical VHF band are hereby allocated for the use of private aeronautical stations.

- a. 122.8MHZ is assigned to private airports to be operated by a duly licensed Aeronautical Station Operator. Its use is to be limited to the necessities of safe and expeditious operations of private aircraft pertaining to runway and wind conditions, type of fuel available, weather and dispatching. Secondly, communications may be transmitted concerning ground transportation, food and lodging during transit. This service shall not be used for Air Traffic Control purposes.
- b. 122.9MHZ is to be used to provide communications essential to conduct the activities being performed by or directed from private aircraft. Example is ground/air communications pertaining to agriculture, ranching, conservation activities, forest fire fighting, aerial advertising and parachute jumping. This service shall not be used for Air Traffic Control purposes.

3.5.2 Interested parties may avail of these frequencies by application in writing to the Director General of Civil Aviation Authority of the Philippines.

3.5.3 125.0MHZ is for exclusive use of Bluebird, Kalayaan and Kapitagan flights.

3.6 Aircraft Uniform Communication (UNICOM) Frequency

3.6.1 The frequency 121.9MHZ is designated as the UNICOM frequency for use by all aircraft operating at or in the vicinity of aerodromes not provided with Air Traffic Service. The tower frequency for airports with Aerodrome Control Service or the FSS frequency for airports with ATS Advisory Service is the designated UNICOM frequency for use when these services are closed. The following procedures shall be adhered to by pilots concerned:

- a. Listen to the designated UNICOM frequency when flying within 10NM from the aerodrome and when maneuvering on the movement area of the aerodrome.
- b. Transmit blindly on the designated UNICOM frequency by stating the name of the aerodrome first, followed by the aircraft identification and type, present position and altitude, intended maneuvers when landing, departing or transiting and end by repeating the name of the aerodrome.
 - i. For landing, transmit when;
 - a. approaching 10NM from the aerodrome;
 - b. entering the downwind leg of the traffic circuits;
 - c. turning on final approach; and
 - d. on landing roll and exiting the runway.
 - ii. For departing, transmit when;
 - a. taxiing to enter the runway for take-off;
 - b. on take-off roll and airborne;
 - c. intended climb direction or maneuvers and level;
 - d. leaving 10NM of the aerodrome.
 - iii. For transiting, transmit when;
 - a. approaching 10NM from the aerodrome;
 - b. approaching 5NM from the aerodrome;
 - c. flying overhead or abeam the aerodrome;
 - d. leaving 5NM from the aerodrome;
 - e. leaving 10NM from the aerodrome.
- c. Pilots are encouraged to communicate with each other on the designated UNICOM frequency in order to coordinate maneuvers and effect adequate separation of aircraft.

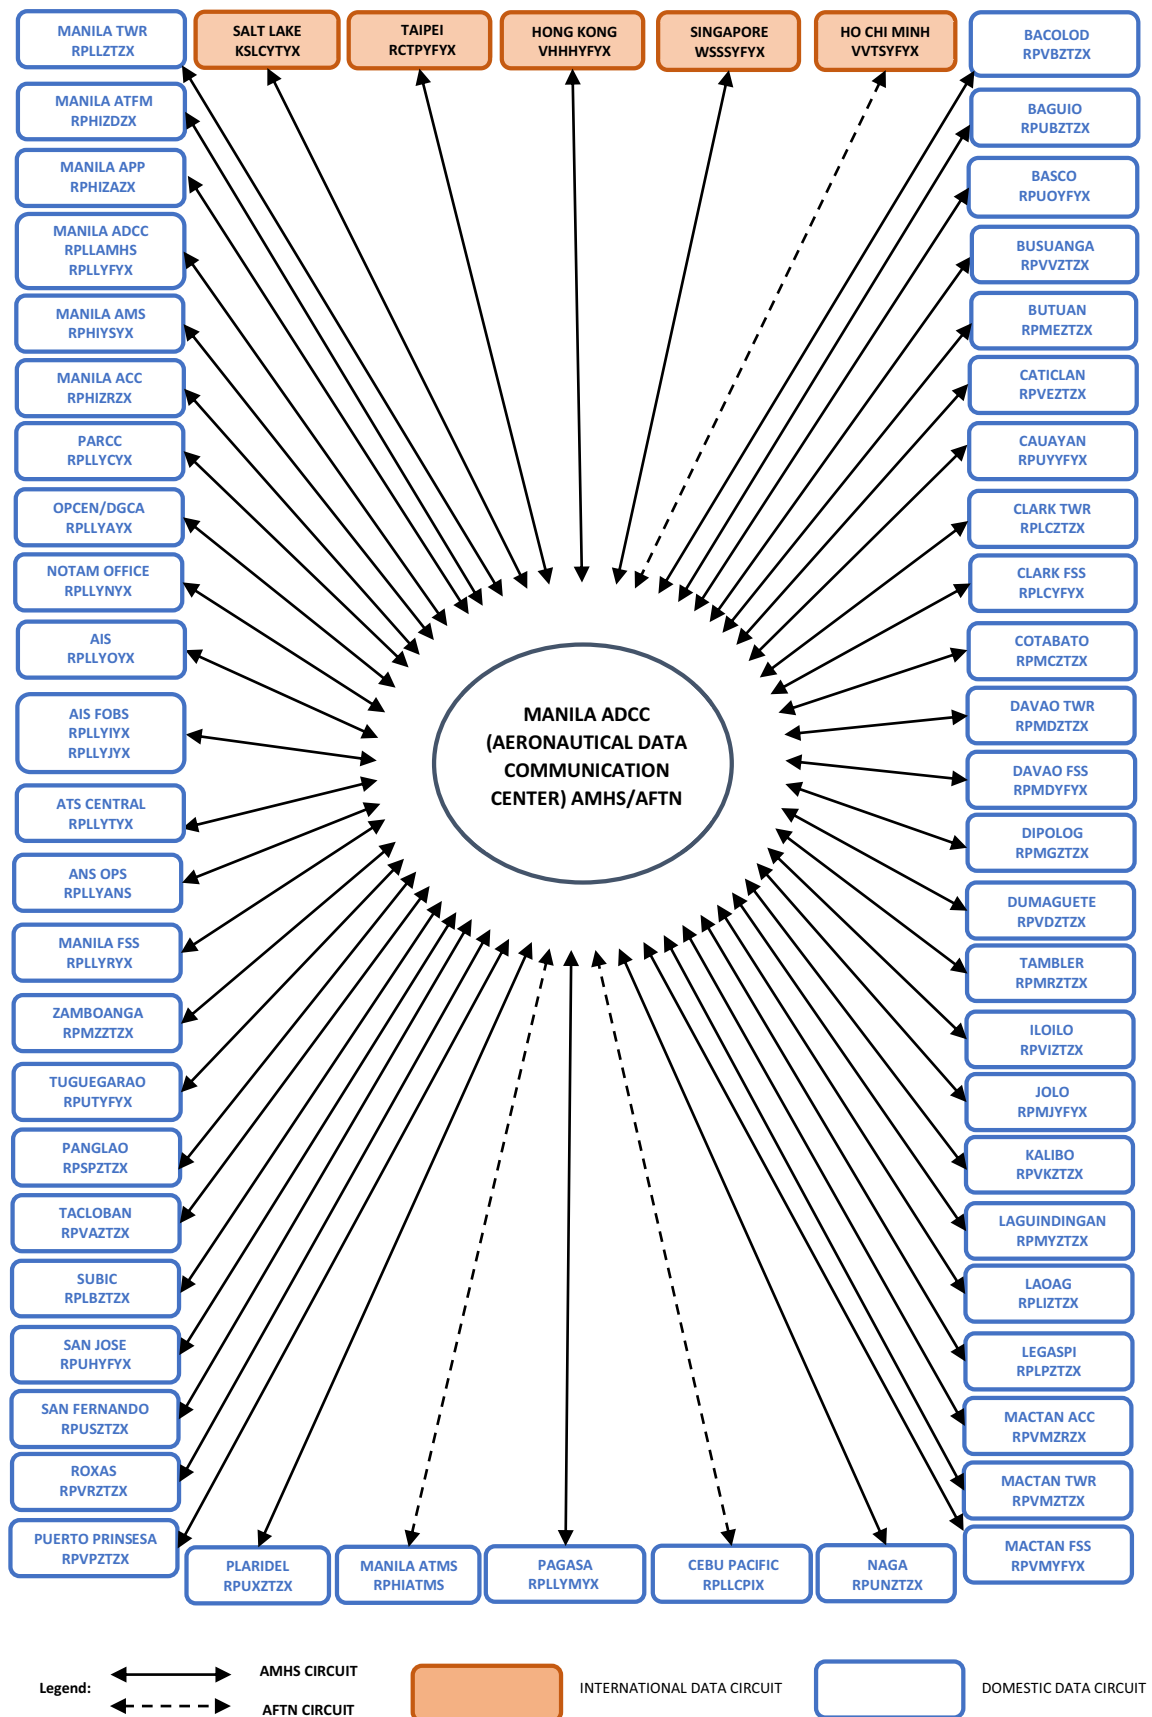

3.6.2 All concerned (e.g. pilots, aircraft operators, flying schools, etc.) are hereby directed to refrain from using any other unpublished frequency as their own designated UNICOM frequency.

3.7 Where detailed information can be obtained

3.7.1 Details of the various facilities available for the enroute traffic can be found in ENR 4.

- 3.7.2 Details of the facilities available at the individual aerodromes can be found in the relevant sections of Part 3 (AD). In cases where a facility is serving both the enroute traffic and the aerodromes, details are given in the relevant sections of Part 2 (ENR) and Part 3 (AD).
- 3.7.3 Details of public broadcasting station are given in GEN 3.4-7 Table 1 Selected Public Broadcasting Station.

4. Manila ADCC International and Domestic Data Circuit (AMHS/AFTN)

5. ATS Direct Speech Circuit
